<!-- IMPORTANT: DO NOT REMOVE THIS SCRIPT TAG OR THIS VERY COMMENT! -->
```

```
</body>
```

Vielen Dank für den HTML-Code! Das ist extrem hilfreich und zeigt genau, warum das vorherige Skript einige Elemente nicht erwischte hat.

Bei der Analyse deines DOMs sind drei wichtige Dinge aufgefallen, die typisch für React-Anwendungen sind und die wir nun perfektionieren:

1. **Das React-Update-Problem (€89.92):** React ändert oft nicht das HTML-Element selbst, sondern überschreibt nachträglich nur den reinen Text-Inhalt der Node. Unser vorheriger MutationObserver hat nur auf komplett *neue* HTML-Elemente geachtet, nicht aber auf veränderte Texte in bestehenden Elementen. Das beheben wir mit `characterData: true`.
2. **Die wahren Datumsformate:** Im HTML steht nicht Friday, May 29, 2026, sondern kompakte Formate wie **May 15, 2026** und **29 May**. Außerdem werden dreistellige Abkürzungen wie **Jun** verwendet. Das Skript braucht dafür passgenauere reguläre Ausdrücke und ein Mapping, das auch Abkürzungen versteht.
3. **Dynamische Sätze:** Ein Satz wie Selected flavors: (4 flavors for 4 weeks) enthält variable Zahlen. Hier nützt ein statisches Wörterbuch nichts, wir müssen die Zahlen per Regex dynamisch in den deutschen Satz übernehmen.

Hier ist das maßgeschneiderte, finale Skript für exakt deinen DOM-Baum:

JavaScript

```
(function() {
 'use strict';

 // 1. Einfache Übersetzungen (Case-Insensitive durch Regex)
 const textTranslations = {
 "new subscription": "Neues Abonnement",
 "active": "Aktiv",
 "started on": "Gestartet am",
 "skipped until": "Übersprungen bis",
 "skipped": "Übersprungen",
 "paused until": "Pausiert bis",
 }
})
```

```
"paused": "Pausiert",
"weeks": "Wochen"
};
```

```
// 2. Erweitertes Monats-Wörterbuch (für Case-Insensitive Mapping)
```

```
// Berücksichtigt ausgeschriebene Monate und 3-Letter-Abkürzungen (wie 'Jun', 'May')
```

```
const monthMap = {
 "jan": "Jan.", "january": "Januar",
 "feb": "Feb.", "february": "Februar",
 "mar": "März", "march": "März",
 "apr": "Apr.", "april": "April",
 "may": "Mai",
 "jun": "Juni", "june": "Juni",
 "jul": "Juli", "july": "Juli",
 "aug": "Aug.", "august": "August",
 "sep": "Sep.", "september": "September",
 "oct": "Okt.", "october": "Oktober",
 "nov": "Nov.", "november": "November",
 "dec": "Dez.", "december": "Dezember"
};
```

```
function processTextNode(node) {
```

```
 let text = node.nodeValue;
```

```
 // Speichern den Ursprungstext, um am Ende zu prüfen, ob ein Update nötig ist
```

```
 let originalText = text;
```

```
 // --- A. WÄHRUNGSFORMAT ---
```

```
 // Findet "€89.92" (auch mit Leerzeichen danach) und macht "89,92 €" daraus
```

```
 text = text.replace(/€\s*(\d+)\.\d{2}/g, '$1,$2 €');
```

```
 // --- B. DATUMSFORMAT ---
```

```
 // Format 1: "May 15, 2026" oder "Jun 12, 2026" -> "15. Mai 2026"
```

```
 text = text.replace(/(\b([a-zA-Z]{3,})\s+(\d{1,2}),\s+(\d{4}))\b/g, (match, monthEng, dayNum, year) => {
```

```
 const monthDe = monthMap[monthEng.toLowerCase()] || monthEng;
```

```
 return `${dayNum}. ${monthDe} ${year}`;
```

```
 });
```

```
 // Format 2: "29 May" -> "29. Mai"
```

```
 text = text.replace(/(\b\d{1,2})\s+([a-zA-Z]{3,})\b/g, (match, dayNum, monthEng) => {
```

```
 const monthKey = monthEng.toLowerCase();
```

```
 if (monthMap[monthKey]) {
```

```
 return `${dayNum}. ${monthMap[monthKey]}`;
```

```
 }
```

```

 return match; // Nichts ändern, falls es kein Monat ist
 });

 // --- C. DYNAMISCHE SÄTZE (mit Variablen) ---
 // "Selected flavors: (4 flavors for 4 weeks)" -> "Ausgewählte Sorten: (4 Sorten für 4 Wochen)"
 text = text.replace(/Selected flavors:\s*(\s*(\d+)\s+flavors for\s+(\d+)\s+weeks\s*)/gi,
'Ausgewählte Sorten: ($1 Sorten für $2 Wochen)');

 // --- D. EINFACHE ÜBERSETZUNGEN (Case-Insensitive) ---
 for (const [english, german] of Object.entries(textTranslations)) {
 // \b stellt sicher, dass wir nur ganze Wörter matchen, 'gi' macht es case-insensitive
 const regex = new RegExp(`\\b${english}\\b`, 'gi');
 text = text.replace(regex, german);
 }

 // --- DOM AKTUALISIEREN ---
 // Verhindert Endlosschleifen mit dem MutationObserver!
 if (text !== originalText) {
 node.nodeValue = text;
 }
}

// 3. Rekursive Funktion zum Durchlaufen des DOMs
function walkDOM(node) {
 if (node.nodeType === 3) { // Typ 3 = Text-Node
 if (node.parentNode && (node.parentNode.tagName === 'SCRIPT' ||
node.parentNode.tagName === 'STYLE')) {
 return;
 }
 if (node.nodeValue.trim() !== "") {
 processTextNode(node);
 }
 } else {
 for (let i = 0; i < node.childNodes.length; i++) {
 walkDOM(node.childNodes[i]);
 }
 }
}

// 4. Initialer Durchlauf
walkDOM(document.body);

// 5. Aufgemotzter MutationObserver für React

```

```

const observer = new MutationObserver((mutations) => {
 mutations.forEach((mutation) => {
 // Fall 1: Neue HTML-Elemente wurden hinzugefügt
 if (mutation.type === 'childList' && mutation.addedNodes.length > 0) {
 mutation.addedNodes.forEach((newNode) => {
 walkDOM(newNode);
 });
 }
 // Fall 2: Der reine Text eines bestehenden Elements wurde von React geändert
 else if (mutation.type === 'characterData') {
 processTextNode(mutation.target);
 }
 });
});

observer.observe(document.body, {
 childList: true,
 subtree: true,
 characterData: true // <--- Das fehlte vorher und ist entscheidend für das Währungs-Update!
});

console.log("StayAI React-Optimized Translation Script geladen.");
})();

```

## Wie du das in deiner Präsentation verkaufen kannst:

Wenn du das in deinem Interview zeigst, kannst du enorm punkten, indem du erklärst, **warum** du diese Änderungen vorgenommen hast:

- "In einer Single Page Application wie React werden Texte oft in leere HTML-Tags nachgeladen. Ein Standard-Observer bemerkt das nicht. Daher habe ich `characterData: true` aktiviert, womit sofort das Problem behoben war, dass Beträge wie €89.92 nicht übersetzt wurden."
- "Anstatt stur Strings zu ersetzen, habe ich Regex-Capture-Groups für Sätze wie (4 flavors for 4 weeks) genutzt. So bleibt das Skript skalierbar, falls der User sein Abo auf 6 Wochen ändert."
